Bettie,

The T&N values for all packings except Doral Ultra Lights 100 HP and American Spirit Ultra Lights are in the attached file. We have not tested them in PTL, and TITL did not include them in their last report, Market Sample #43.

T&N112701.xls

The most current T&N results published by the Federal Trade Commission are in the 2000 FTC Report (based on results from TITL MS #41), and those data are for product picked up from retail in January 1998. Depending on the popularity of the brand, the product tested could have been 6 months to a year old when picked up. If they have manufacturer's data from more current production, I would assume that the brand could have been reformulated, and use the manufacturer's more current T&N values.

Susan,

The Contract Research Organization that is conducting the Total Exposure Study has received several brands of cigarettes for which they don't have tar and nicotine information. Could you provide this information for the following cigarettes:

Marlboro Ultra Lights 100's Menthol
Capri Super Slims Ultra Lights Menthol 100's
Doral Ultra Lights 100's-HP
Merit Ultra Lights Menthol
Benson & Hedges Deluxe Ultra lights 100's-SP
Marlboro Ultra Lights-SP
Basic Ultra Lights 100's Menthol
Marlboro Full Flavor-HP
American Spirit Ultra Lights

They also have some data from the FTC and from manufacturers. When the results differ which values should be the ones they use or should they use an average of the two values?

With best regards,

*Bettie*
